Session : Postgraduate Course 4 (Kidney/Pancreas)

Date & Time, Place : November 16 (Thu), 10:30-12:00, Room 5F-1

Session Title : Donor and recipient evaluation in kidney transplantation

---

## **Preparation of Suboptimal Recipient Candidate**

**Natavudh Townamchai**

*Chulalongkorn University, Thailand*

---

Our Asian countries have a high prevalence of hepatitis B virus (HBV) infections. The utilization of kidney donors with HBV infection can expand the donor pool for our patients. Vaccination plays a crucial role in pre-transplant preparation, increasing the opportunities for recipients to accept kidneys from these donors. In this session, we will focus on the evaluation and preparation of kidney recipient candidates regarding infection and vaccination. We will also describe two examples of kidney transplants from HBV-positive donors. Furthermore, we will delve into more details about HBV preparation for both donors and recipients, as well as discuss how to prevent HBV transmission and reactivation, which includes vaccination.
